

SOFTWARE UPDATES POLICY

The software of your SCIO/EDUCTOR device is updated periodically. An update of the software is planned for release every year.

This can only happen after the software revision has been properly tested, controlled and released under the regulatory process. When released, the updated version of the software can be downloaded from the Budapest Home Office website www.scio-eductor.com.

As of 1 February 2009, devices are not shipped with a DVD of the software, but with a pendrive. The software is also available for download and activation online.

Throughout the year, there may be patches to fix a slight problem with some screens or functions of the software (i.e. a certain window does not close). This can be downloaded from the Budapest Home Office website www.scio-eductor.com.

All information regarding the updated version of the software and potential patches can be found on www.scio-eductor.com. You can find the latest information on the “News” section of www.scio-eductor.com as well as in our periodic Newsletters which are automatically emailed to everyone who is signed up on www.scio-eductor.com. Please check the website regularly for any information regarding patches and for the latest version of the software.

Alternatively, you can always contact your Sales Representative for assistance.
